PATIENT CHART EXTRACT - VICTORIA GENERAL HOSPITAL (TEST)

MADE-UP TEST PATIENT - NOT A REAL PERSON - FOR SANDBOX TESTING ONLY

Patient: TESTPATIENT, Harold DOB: 1952-02-11 Sex: M
MRN: TEST60922 Location: 5B Orthopedics, Bed 4
Admitted: 2026-11-06 (Orthopedics) Attending: Dr. B. Bones (made-up)

ORTHOPEDICS ADMISSION NOTE

Date of service: 2026-11-06 14:10
Chief complaint: Left hip pain after a fall.

HISTORY OF PRESENT ILLNESS

74-year-old man who slipped while stepping off a curb at walking pace and landed on his left side. Unable to weight-bear. No head strike, no loss of consciousness. Family reports 3 months of mid-back pain, fatigue and about 6 kg weight loss. Seen by family doctor for the back pain, treated as mechanical. Family doctor letter: Creatinine 92 umol/L on Oct 2, 2025.

PAST MEDICAL HISTORY

Hypertension
Type 2 diabetes (diet controlled)
Osteoarthritis of both knees
No known cancer.

HOME MEDICATIONS

Ramipril 10 mg PO daily
Naproxen 500 mg PO bid prn back pain
Acetaminophen 1000 mg PO tid

ALLERGIES: No known drug allergies

EXAMINATION

2026-11-06 13:40 BP: 152/88 HR: 92 RR: 18 Temp: 36.9 C SpO2: 95% Weight: 78 kg
Left leg shortened and externally rotated. Distal neurovascular status intact. Tender over the mid thoracic spine.

ASSESSMENT AND PLAN

Left subtrochanteric femur fracture after a low-energy fall.
AKI likely from dehydration after the fall and naproxen. IV fluids.
Anemia likely from fracture-related blood loss.
Plan intramedullary nail tomorrow. Hold ramipril and naproxen.
Medicine/hospitalist consult for pre-operative medical optimization.

LABORATORY RESULTS

Collected: Nov 6, 2026 12:50

Test	Result	Units	Reference	Flag
Hemoglobin	98	g/L	135 - 175	L
MCV	92	fL	80 - 100	
White Blood Cell Count	6.1	x10^9/L	4.0 - 11.0	
Platelets	168	x10^9/L	150 - 400	
Sodium	136	mmol/L	135 - 145	
Potassium	4.8	mmol/L	3.5 - 5.0	
Creatinine	168	umol/L	60 - 110	H
Calcium	2.92	mmol/L	2.10 - 2.55	H
Albumin	30	g/L	35 - 50	L
Total Protein	92	g/L	60 - 80	H
Glucose	7.4	mmol/L	3.6 - 7.8	
INR	1.0	ratio	0.8 - 1.2	

ORTHOPEDICS PROGRESS NOTE - HD2

Date of service: 2026-11-07 07:50
Pain controlled. For OR today, booked as second case.
2026-11-07 07:30 BP: 138/80 HR: 88 RR: 18 Temp: 37.0 C SpO2: 95%
Creatinine improving slowly with fluids. Medicine consult pending.

LABORATORY RESULTS

Collected: Nov 7, 2026 05:30

Test	Result	Units	Reference	Flag
Hemoglobin	94	g/L	135 - 175	L
Sodium	137	mmol/L	135 - 145	
Potassium	4.6	mmol/L	3.5 - 5.0	
Creatinine	151	umol/L	60 - 110	H
Calcium	2.88	mmol/L	2.10 - 2.55	H
Magnesium	0.84	mmol/L	0.70 - 1.00	
Phosphate	1.21	mmol/L	0.80 - 1.45	

ACTIVE MEDICATION ORDERS (2026-11-07)

Acetaminophen 1000 mg PO q6h
Hydromorphone 0.5 mg PO q4h prn pain
Enoxaparin 40 mg SC daily (held from midnight for OR)
Normal saline 100 mL/h IV
Ramipril 10 mg PO daily (on hold)

ACTIVE PROBLEM LIST

Hip fracture, left subtrochanteric
Acute kidney injury
Hypertension
Type 2 diabetes

CONSULT REQUEST - MEDICINE / HOSPITALIST

Date of service: 2026-11-07 08:10
From: Orthopedics. Reason for consult: pre-operative medical optimization for hip fracture fixation today. AKI improving. Please clear for OR.

HOSPITALIST CONSULT NOTE (DRAFT, INCOMPLETE)

Date of service: 2026-11-07 09:30
Consulted by Orthopedics for pre-operative assessment.
2026-11-07 09:15 BP: 140/82 HR: 90 RR: 18 Temp: 37.1 C SpO2: 95%
Low-energy fall with a subtrochanteric (not neck of femur) fracture.
Back pain and weight loss for 3 months. High calcium, new kidney injury, anemia on arrival before much blood loss, and a wide gap between total protein and albumin.
Radiology called the fracture-site lucency osteopenia and the rib lesion an old fracture.
Possible pathological fracture? Myeloma?
To discuss with Orthopedics before fixation.

RADIOLOGY REPORTS

X-RAY LEFT HIP AND FEMUR

Date of exam: 2026-11-06 12:20

FINDINGS:

Displaced subtrochanteric fracture of the left femur.
Ill-defined lytic lesion at the fracture site, favoured to represent osteopenia.
Generalized osteopenia. Mild degenerative change of the left hip joint.

IMPRESSION:

1. Displaced left subtrochanteric fracture.
2. Lucency at the fracture site likely osteopenic bone. Clinical correlation.

X-RAY CHEST (PRE-OPERATIVE)

Date of exam: 2026-11-06 12:35

FINDINGS:

Lungs clear. Small left pleural effusion. Normal heart size.
Expansile lytic lesion of the right 6th rib, likely an old healed fracture.
Mild compression deformity of T8, age indeterminate.

IMPRESSION:

No acute cardiopulmonary process. Possible old rib fracture.
